

MSO3000HD Series High-resolution Oscilloscope

Datasheet

V1.2

July 2025

Product Introduction

MSO3000HD series high-resolution oscilloscope has the maximum bandwidth of 500 MHz, the maximum sampling rate of 2.5 GSa/s, and is equipped with 4 analog channels and 16 digital channels, with the storage depth of up to 500 Mpts. MSO3000HD series adopts exclusive Ultra Phosphor 3.0 technology, achieving the waveform capture rate of up to 1,500,000 wfms/s, with 256 levels of gray temperature colors, and features an innovative digital trigger system with high trigger sensitivity and low jitter.

This oscilloscope supports multiple advanced triggers, serial bus triggering and decoding, and offers advanced sampling and analysis modes such as spectrum analysis, power analysis, histogram, waveform recording, enhanced resolution (ERES), hardware-accelerated template testing, and search and navigation. Additionally, this oscilloscope provides multiple measurement and mathematical operations.

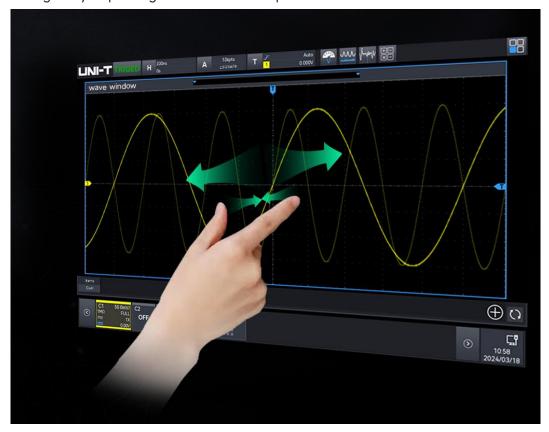

MSO3000HD series features a 10.1-inch capacitive touch screen that supports multiple gestures for common waveform operations. Combined with multiple one-touch keys on the front panel, this greatly optimizes the efficiency of oscilloscope operation and improves the user experience.

Instruments.uni-trend.com 2 / 44

Mainstream touchscreen design providing an intelligent interactive experience

Featuring a 10.1-inch HD capacitive multi-touch screen, it supports a variety of gesture operations such as touch, drag, zoom and rectangle drawing. This makes operation more convenient and smoother, and helping the user learn the instrument more easily. It retains the traditional key and knob operation while also supporting mouse and keyboard, making instrument operation more versatile and greatly improving the interactive experience.

Instruments.uni-trend.com 3 / 44

Brand new appearance design

MSO3000HD series features an innovative appearance with a double-sided thinning design. The display is aligned horizontally with the panel to enhance touch operation and visibility range. The black frame margin, combined with the metal grey and black body, enhances the overall sense of the instrument.

Instruments.uni-trend.com 4 / 44

Features and Advantages

- Analog channel bandwidth: 500 MHz/350 MHz/200 MHz
- Real-time sampling rate of the analog channel is up to 2.5 GSa/s. The maximum sampling rate of the digital channel is 1.25 GSa/s.
- 12-bit vertical resolution, with up to 4096 points, ensures that the waveform details are clearly visible.
- 4 analog channels, 16 digital channels, and the storage depth of up to 500 Mpts
- The maximum waveform capture rate is up to 500,000 wfms/s (sequence mode: 1,500,000 wfms/s)
- 9 instrument functions: digital oscilloscope, logic analyzer, function/arbitrary waveform generator, spectrum analyzer, digital voltmeter, frequency meter, protocol analyzer, bode plot analyzer and power analyzer.
- Built-in 50 MHz equivalent performance dual-channel function/arbitrary waveform generator, supporting load the oscilloscope's on-screen data to Gen arbitrary waveform output in real time, and offering compatibility with multiple built-in arbitrary waveforms.
- Bode plot loop test analysis function designed to analyze the system stability.
- Parameter measurement adds Bar Chart and line chart
- Uninterrupted hardware real-time waveform recording and analysis of up to 125,000 frames and supports USB memory export function.
- Enhanced FFT of up to 4M points, supporting the spectrum analyzer functions such as frequency setting, waterfall curve, detection setting, and marker.
- Supports ERES (enhanced resolution) of up to 4-bit
- 56 kinds of parameter measurements
- Multi-Windows display
- Multi-channel 7-digit hardware frequency meter, supporting frequency refresh time and adjustable effective digit settings.
- DVM multi-channel RMS measurement: DC, AC RMS and DC+ACRMS
- Multiple trigger types: edge, pulse width, video, ramp, runt pulse, over-amplitude pulse, delay,
 timeout, duration, setup & hold, Nth edge and code pattern
- Protocol triggering and decoding function: RS232/UART, I²C, SPI, CAN, CAN-FD, LIN, FlexRay, Audio, MIL-STD-1553B, Manchester, SENT, ARINC429
- Zone trigger for capturing sporadic signals and observing complicated signals.
- Ultra Phosphor3.0 provides a super fluorescent display effect with up to 256 levels of gray.

Instruments.uni-trend.com 5 / 44

■ 10.1-inch 1280x800 HD capacitive multi-touch screen, supporting gesture control such as click, slide, zoom, edit, and drag

- Multiple peripheral interfaces: USB Host, USB Device, LAN, EXT Trig, AUX Out (Trig Out, Pass/Fail, DVM), Gen Out, HDMI
- Supports SCPI (Standard Command for Programmable Instrument)
- Built-in WebServer for accessing and controlling the instrument through a browser, supporting access from PC and mobile devices for cross-platform compatibility.
- Supports on-line update

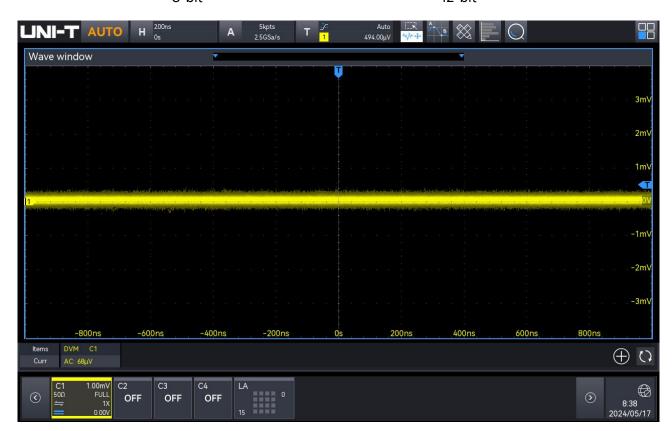

Instruments.uni-trend.com 6 / 44

Design Features

High-resolution

12-bit high-resolution ADC sampling has a quantization level of up to 4096, which is 16 times that of a traditional 8-bit ADC, allowing for better restoration of waveform details.

The excellent background noise, which is only 70 $\,\mu Vrms$ at the full bandwidth of 500 MHz, allows the 12-bit ADC to perform optimally.

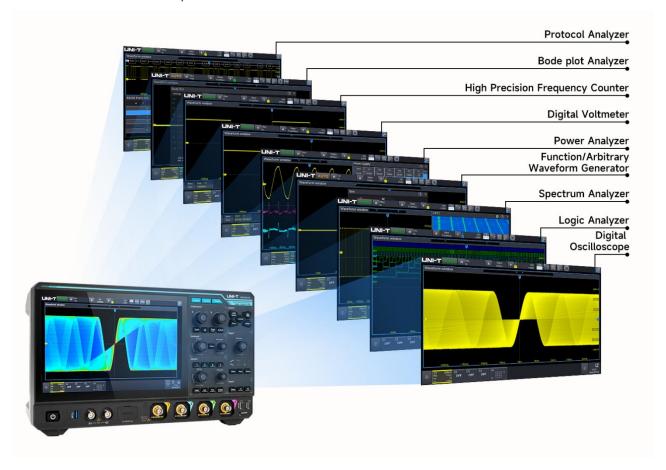

Instruments.uni-trend.com 7 / 44

Application Scope

Cost-effective, Nine-in-one Integrated Oscilloscope

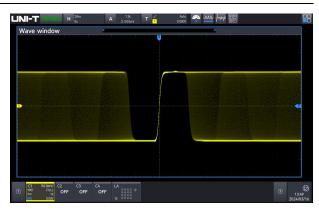

MSO3000HD series integrates nine instrument functions, including a digital oscilloscope, logic analyzer, function/arbitrary waveform generator, spectrum analyzer, digital voltmeter, high-precision frequency meter, protocol analyzer, Bode plot analyzer, and power analyzer. This is a cost-effective oscilloscope for users.

Instruments.uni-trend.com 8 / 44

Digital Oscilloscope

- Bandwidth: 500 MHz/350 MHz/200 MHz
- Maximum real-time sampling rate: 2.5 GSa/s
- Maximum storage depth: 500 Mpts
- 4 analog channels, 1 external trigger channel

Logic Analyzer (Option)

■ 16-channel logic analyzer (hardware standard) can be used with the purchase of a UT-M15 logic analyzer probe (optional).

- Maximum sampling rate: 1.25 GSa/s
- Maximum storage depth: 250 Mpts
- Minimum detectable pulse width: 800 ps
- Digital probe provides separate high 8-bit and low 8-bit connections, it simplifies the connection of DUT. When connecting to square pins, UT-M15 can be connected directly to 8x2 square pins (2.54 mm).
- Logic analyzer probe UT-M15 has great electrical characteristics, with the input impedance of 101 k Ω ± 1% and the capacitive load of only 9.0 pF.

Function/Arbitrary Waveform Generator (Option)

- 50 MHz equivalent performance dual-channel output
- Sampling rate: 312.5 MSa/s
- Vertical resolution: 16-bit
- Multiple built-in standard waves: Sine, square,
 pulse, ramp, arbitrary, noise, and DC
- AM, FM, ASK, FSK, and sweep frequency output

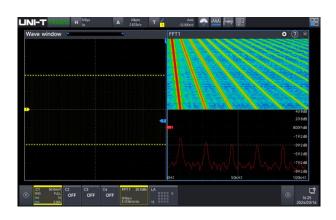

Spectrum Analyzer

- Standard enhanced FFT with up to 4 Mpts for 4-channel signal analysis
- Frequency range: 0 to 1.25 GHz
- Waterfall curve
- 4 traces and 4 detections
- Mark type: Auto, manual and threshold
- Marker point list

Digital Voltmeter

- 4-digit voltmeter
- Measurement: DC/AC RMS/AC+DCRMS
- Limit alarm

High-precision Frequency Meter

- 7-digit hardware frequency meter
- Frequency meter: Refresh time and adjustableeffective digit settings
- Summary counter

Bode Plot Analyzer (Option)

- Built-in function/arbitrary waveform generator
- Frequency response analysis
- Loop stability analysis
- Filter analysis
- Amplifier analysis

Protocol Analyzer

 12 kinds of triggering and decoding protocols including those for computers, embedded serial buses, automobile, aerospace, and audio applications.

- Decoding can be operated in the pause and record modes.
- Supports event list and search function

Power Analyzer (Option)

With the development of chip technology, the requirements for power supply systems are also increased. Nowadays, low-voltage, high-current power supply networks have become a trend. Especially for chips or networks composed of precision components, it is essential to ensure reliable power supply and noise suppression across various parts of the circuit, as well as to maintain the integrity of signal transmission between chips. This presents greater challenges for power supply testing. Designers are now more focused on energy-efficient power supplies and response speed to ensure the power supply remains stable and clean. Based on this, power integrity testing becomes particularly important. Power integrity directly affects signal integrity, and conversely, signal quality also reflects power quality. Furthermore, power quality can cause a series of electromagnetic interference issues, which can be a significant concern for designers. Therefore, having an oscilloscope capable of power analysis is undoubtedly your best choice.

MSO3000HD series provides a comprehensive set of power analysis tools and evaluation results. To use them, simply select the appropriate analysis type and connect the voltage probe and current probe to the power system test point or specified test fixtures, as shown in the diagram. Then, connect to the desired channel for observation and make any necessary fine-tuning adjustments to achieve your desired results.

"*" indicates features being added. Power analysis support is subject to the latest firmware available on the official website.

Ultra Phosphor 3.0

When attempting to identify and debug occasional or intermittent anomalies in signals, the waveform capture rate is a crucial indicator. This rate represents the oscilloscope's ability to capture waveforms per unit of time, reflecting its speed in processing and analyzing signals.

MSO3000HD series uses advanced software and hardware architecture to achieve 5 to 10 times higher data processing performance than previous generation products. Equipped with Ultra Phosphor 3.0, it supports 8-channel parallel graph mapping, with a processing rate of up to 20 Gbps and the waveform capture rate of up to 500,000 wfms/s, and up to 1.5 million 750 ps fast edge signals in sequence mode, facilitating easy and accurate capture of occasional signals.

Instruments.uni-trend.com

Brand New Quick Autoset Strategy

Fuzzy control is an intelligent control method based on fuzzy set theory, fuzzy linguistic variables, and fuzzy logic reasoning. The advantages of the algorithm are fewer iterations, faster speed, and better anti-interference ability.

In the past, oscilloscopes performed Autoset to find the appropriate signal amplitude and frequency for display. However, the response speed varied significantly among oscilloscope manufacturers due to different solutions adopted. This inconsistency affected the user experience.

UNI-T has redefined Autoset execution by adopting a fast fuzzy algorithm based on analog signals and multi-channel parallel processing technology. This is complemented by a 7-bit high-precision hardware frequency counter, allowing the oscilloscope to quickly find and process the amplitude and frequency of unknown signals during Autoset execution. The entire channel can be opened in less than 1.5s, and a single channel in less than 1s, greatly enhancing working efficiency and reducing the risk of misuse for users who frequently change test objects and require rapid testing.

Multiple Parameter Measurements

Parameter measurement is a crucial function for engineers when using an oscilloscope. MSO3000HD series provides 56 measurement parameters, with the capability to display up to 27 measurement parameters simultaneously. Each page of measurement statistics displays 9 parameters, which can be presented in Bar Chart and line chart. The Bar Chart visually represents the probability distribution of the parameters, while the line chart reflects parameter changes over time.

Instruments.uni-trend.com 14 / 44

The parameter snapshot displays 39 test items for single-channel measurement. These include voltage and time measurement parameters, with measured results constantly refreshed during the process. MSO3000HD series introduces a new amplitude calculation strategy, incorporating top and bottom strategies, making it convenient for engineers to utilize the parameter measurement function. Additionally, MSO3000HD series now includes a burst function that displays burst parameters, enabling accurate and immediate analysis of channel measurement data.

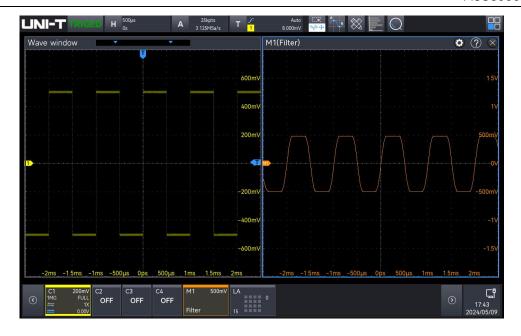

Mathematical Operation

MSO3000HD series provides a system of algorithms for complex waveform operations, allowing you to further process waveforms and display the results directly on the oscilloscope.

- Basic operation: +, -, *, ÷
- Digital filter (high-pass, low-pass, band-pass and band-limit)
- Custom function operation: analog channel, and math

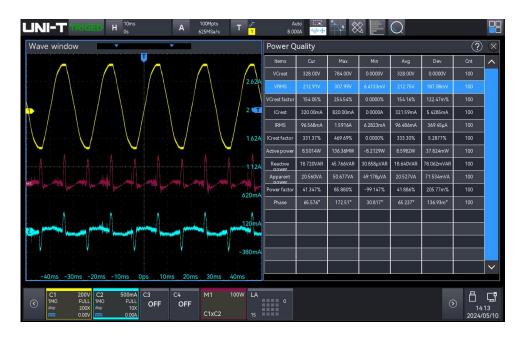

Instruments.uni-trend.com 15 / 44

Navigate and Search

The storage depth of MSO3000HD series is upgraded to 500 Mpts, allowing it to capture tens of thousands of waveforms in one capture. Searching for waveforms manually can be time-consuming for engineers.

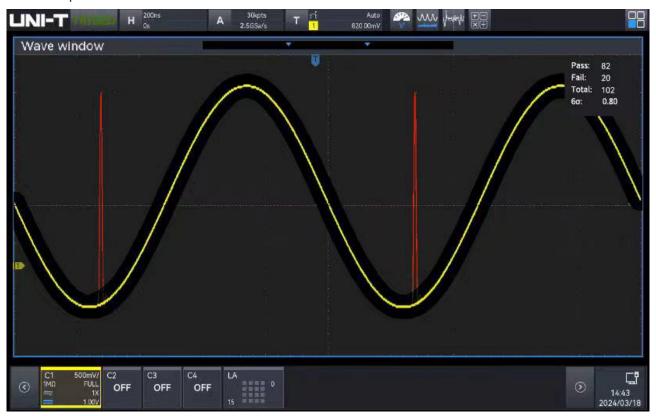

MSO3000HD series provides customizable search conditions, which are very useful for locating sampled signals and finding waveforms of interest. With the analysis function, events can be analyzed in detail, eliminating the time-consuming and inconvenient process of manual searches.

Instruments.uni-trend.com 16 / 44

Hardware-accelerated Template Test

Using hardware-accelerated template testing, the waveform test can be completed in a few seconds to meet special standards.

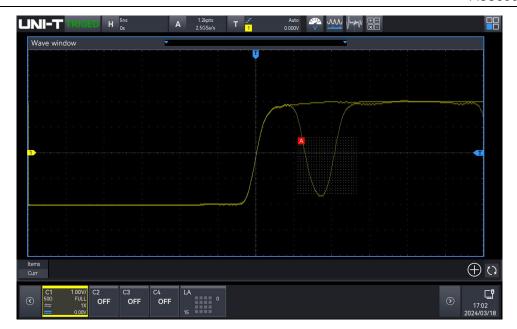

Zone Trigger

The zone trigger function serves two purposes: firstly, to isolate occasional abnormal signals, and secondly, to stabilize the waveform display. Only a stable trigger can provide a stable waveform display. With this function, engineers can handle complex and variable signals during debugging. The zone trigger function is easy to use, so engineers don't have to spend time learning how to use it.

A rectangle drawing gesture can quickly isolate a signal to be observed. The waveform does not have to be completely stable to trigger; the zone trigger function can capture a waveform that meets the specified conditions and stabilize it for triggering.

Instruments.uni-trend.com 17 / 44

Various Connection

MSO3000HD series offers a wide range of connections with flexibility and convenience.

Multiple Control Methods

Control or secondary development through the instruction set conforming to the SCPI standard.

Instruments.uni-trend.com 18 / 44

Use UNI-T free instrument manager for control.

It can be controlled by installing instrument management software on the PC side through LAN, or USB Device.

Performance Characteristics

All specifications are guaranteed, except those marked "typical".

Unless otherwise stated, all the performance characteristics are suitable for the probe that the attenuation switch set to 10x and MSO3000HD series mixed signal oscilloscope.

To meet these specifications, the oscilloscope should first meet the following conditions.

- The instrument must be operated continuously for at least thirty minutes at the specified operating temperature.
- The self-calibration must be performed when the operating temperature reaches or exceeds 5 °C.

| Model | MSO3054HD | MSO3034HD | MSO3024HD |
|--|--|-------------|-----------|
| Analog bandwidth | 500MHz | 350MHz | 200MHz |
| Calculated rise time (10 to 90%) (typical) | ≤0.80ns | ≤1.00ns | ≤1.80ns |
| Input/output | 4 analog channels | | |
| channel number | 16 digital channels | | |
| | 2-channel signal output | | |
| Sampling mode | Real-time sampling | | |
| Acquisition mode | Normal, peak detect, high resolution, averaging, Enhanced resolution | | |
| ERES | Enhanced bit: 1 , 1.5 , 2 , 2.5 , 3 , 4 (12 to 16-bit) | | |
| Maximum sample rate | Analog channel: 2.5 GSa/s (interweave mode), 1.25 GSa/s (non-interweave mode) Digital channel: 1.25 GSa/s | | |
| Average | After all channels have reached N samples simultaneously, the number of N times can be selected from 2, 4, 8, 16, 32, 64, 128, 256, 512, 1024, 2048, 4096, 8192. | | |
| Memory depth | Auto (limit to 5 Mpts), 25 kpts, 250 kpts, 500 kpts, 5 Mpts, 50 Mpts, 100 Mpts, Max | | |
| Maximum waveform | 500,000 wfms/s | | |
| capture rate | 1,500,000 wfms/s (sequ | ience mode) | |
| Sequential sampling | Maximum 125,000 frames, minimum two trigger interval < 700 ns | | |
| Hardware real-time | 125,000 frames | | |

Oscilloscope compatibility: all series of UNI-T

Options ordering and installation

Purchase options: Based on your requirements, please purchase the specified function
options from UNI-T Sales Personnel and provide the serial number of the instrument that needs
the option installed.

- 2. **Receive certificate:** You will receive the license certificate based on the address provided in the order.
- 3. **Register and obtain license:** Visit the UNI-T official website license activation session for registration. Use the license key and instrument serial number provided in the certificate to obtain the option license code and license file.
- 4. **Install the option:** Download the option license file to the root directory of a USB storage device, and connect the USB storage device to the instrument. Once the USB storage device is recognized, the Option Install menu will be activated. Press this menu key to begin installing the option.

Limited Warranty and Liability

Uni-T guarantees that the Instrument product is free from any defect in material and workmanship within three years from the purchase date. This warranty does not apply to damages caused by accident, negligence, misuse, modification, contamination, or improper handling. If you need a warranty service within the warranty period, please contact your seller directly. Uni-T will not be responsible for any special, indirect, incidental, or subsequent damage or loss caused by using this device. For the probes and accessories, the warranty period is one year. Visit instrument.uni-trend.com for full warranty information.
